

Ankita Pandit

Software Engineer | Automation Engineer | Full Stack Developer | 5 Years Experience

Redmond, WA | (716) 603-1325 | ankita.pandit.325@gmail.com | linkedin.com/in/ankitapandit | github.com/ankitapandit

Professional Summary

Software Engineer with 5 years of leveraging backend and automation experience across enterprise and cloud-native systems, with a proven track record of improving performance by 55% and eliminating manual workflows by 70%. Skilled in Python, SQL and distributed systems, with full-stack applications. Recently developed AI-based end-to-end app using FastAPI, Next.js and OpenAI — bringing both engineering depth and applied AI capability to backend roles.

Core Competencies

Programming Languages: Python, SQL, Java, C++, Bash, PHP, JavaScript, Ruby

AI: OpenAI API, OpenAI CLIP, HuggingFace Model, Prompt Engineering, LangChain, RAG, Claude Code, OpenAI Codex, GitHub Copilot, Embedding Generation, Vector Search

Web & Frameworks: TypeScript, FastAPI, Streamlit, Next.js, React.js, Flask, jQuery, HTML, CSS, JSON, REST API

Cloud & Database: AWS, Snowflake, Teradata, MySQL, Supabase, MongoDB, Hadoop, Spark, Scala, Firebase, GCP BigQuery

Tools & DevOps: Apache Airflow, Docker, Git, Jenkins, Tableau, Splunk, Selenium, Jest, Junit

Skills: Full Stack Development, Backend Systems, Leadership, CI/CD, Agile, DevOps, Problem-solving

Work Experience

Career Break | Data Engineering and AI Focus

Jul 2024 - Present | Redmond, WA

- Currently, focused on upskilling viz. 4 certifications and 2 AI app development. (Employment authorization was delayed due to visa transition)
- Built a Food Recommendation Application with location-aware and preference-based suggestions, implementing modular backend services and API-driven architecture. [Python, FastAPI, Streamlit, LangChain]
- Developed LuxeLook AI, a full-stack personal styling platform enabling users to upload clothing items and receive outfit recommendations for an event. [Next.js, FastAPI, Supabase, OpenAI, CLIP]

Associate | Apple

Dec 2020 – Jul 2024 | College Station, TX

- Led cross-functional development team at Apple(client) under Cognizant Technology Solutions to architect and deliver enterprise-scale software solutions, resulting in **55%** improvement in throughput and enhanced application performance for critical business operations.
- Developed full-stack application with visualizations to assess system migration impact, enabling stakeholders to make data-driven decisions. Implemented responsive dashboards with resilient backend, reducing manual analysis effort by **70%** across multiple business units.
- Built highly scalable backend systems for multiple sources data processing (Kafka, Oracle DB, Hadoop, MongoDB) with comprehensive orchestration layer. Implemented error handling, retry mechanisms and monitoring to ensure **99.9%** system reliability and support mission-critical applications.
- Contributed to GDPR compliance tool by automating compliance checks. Enhanced security and regulatory adherence, reducing compliance violations by **9%**.
- Developed near real-time data comparison tool with automated reporting capabilities, generating comprehensive data quality reports. Optimized database queries and implemented caching strategies, achieving **80%** productivity gain and **10%** cost reduction.
- Built smart DDL migration tool with parser-based pattern recognition and rule-based transformation logic to convert database objects between platforms. Engineered robust parsing logic and validation framework, increasing migration efficiency by **3.5x** compared to manual processes.
- Architected small scale migration validations tool, implementing dependency resolution strategies, automated validation systems, health monitoring dashboards and orchestration workflows. Delivered **65%** reduction in manual operations, ensuring data integrity and system reliability.

Software Engineer | Cerner Corporation (now Oracle Health)

Mar 2020 – Jun 2020 | Kansas City, MO

- Developed web application using React.js and Ruby on Rails for virtual campus navigation, enhancing new hire onboarding experience, by reducing onboarding time by **3** hours per hire

Software Engineer | Honeywell Technology Solutions Lab

Jul 2017 – Jul 2018 | Bangalore, India

- Developed C++ APIs for aircraft maintenance and connectivity systems, implementing solutions for aviation industry applications with focus on availability and reliability.
- Designed and implemented CI/CD pipeline automation using Bash scripting, streamlining build processes and deployment workflows that currently support multiple next-generation aircraft software systems primarily helicopters.
- Configured and deployed RADIUS server infrastructure for authentication, authorization and accounting (AAA) services, improving system security architecture and access control mechanisms.

Technical Intern | KPMG Global Services

Jan 2017 – May 2017 | Bangalore, India

- Engineered comprehensive P&L reporting application using MS VBA with timesheet management, delivering significant cost savings by replacing expensive third-party softwares.

Certifications

- All You Need to Know About Prompt Engineering, Educative - 2025
- MCP Fundamentals for Building AI Agents, Educative - 2025
- Master GitHub Copilot, Educative - 2025
- Advanced RAG Techniques: Choosing the Right Approach, Educative - 2025
- Lean Six Sigma Green Belt Certification, Honeywell Technology Solutions Lab Private Limited - 2018

Education

M.Sc. in Computer Science and Engineering | University at Buffalo (SUNY)

Aug 2018 - Feb 2020 | Buffalo, NY

B.Tech. in Computer and Communication Engineering | Manipal Institute of Technology Aug 2013 - May 2017 | Manipal, India

Projects

Data Digest – Text extraction and summarization on election violence. [Python, Flask, Frontend, Solr, RESTful API]

Tweet Analyzer - Text search with data analytics such as sentiment analysis, distribution graphs, word cloud, trending hashtags on social media data. [Python, Flask, Frontend, AWS, Solr, RESTful API]
